

Certified Sustainable Canola Program

Your land use could ensure market access for your canola.

Gaining access to multiple, stable canola export markets is more important than ever.

Cargill understands how crucial it is to have a diverse range of customers for Canadian canola. Right now we're looking for growers like you, who can document that your canola is grown on land that meets the requirements of the European Biomass Biofuel Sustainability (2BS) standards.

Simply answer a few questions about your land, and once your land use is verified, your canola production qualifies for Cargill's 2BS program.

To be eligible, your canola must be grown on land that is not:

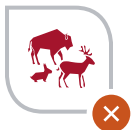

Forested or wooded

Designated as a protected area

Home to rare, threatened or endangered species

Highly biodiverse grassland

Wetland or peatland

Continually forested

Simply contact your Cargill representative and answer a few questions about your land, and once your land use is verified, your canola production qualifies for Cargill's 2BS program.

If for some reason your land use changes, there is no penalty to you. We simply ask that you let us know, and you may be removed from the program.

Visit CargillAg.ca or talk to your local Cargill representative to learn more.
