

# Focal Point

## What is the Focal Point contract?

---

*A Focal Point contract allows customers to participate in potential upside market moves, experiencing penny-for-penny price participation, up or down.*

## Should I use this contract?

---

*Yes, if you:*

- Are not happy with today's cash price and believe the market has upside potential.
- Need to deliver grain now given lack of storage or cash flow needs.
- Don't want to pay the cost of commercial storage fees.
- Want to express a bullish market bias on an existing grain contract.

## What else do I need to know about Focal Point?

---

- Once you have delivered your grain, you will receive an advance payment for a portion of the contract value. The balance will be paid once the Focal Point Adjustment Amount has been determined.
- It is important to understand you are taking on price risk, and if the market goes down your grain price will likewise decrease.

## How does it work?

---

- Enter into a new flat priced grain contract or you can add to an existing grain contract as long as the futures price is established.
- Select your Focal Point Futures Reference Month and establish an Initial Focal Point Price.
- Set a goal for the Final Focal Point Price.
- Monitor the market prices and experience penny-for-penny price participation, up or down.
- Establish your Final Focal Point Price at any time leading up to the Final Pricing Deadline of your Focal Point contract.
- The difference between your Initial and Final Focal Point Prices (the Focal Point Adjustment Amount) will be included as a part of the contract pricing formula.

# How Focal Point works

## EXAMPLE 1: NEW GRAIN CONTRACT

On **November 1**, you need to sell 200MT canola to free up storage space, but you're not happy with the current cash bid of **\$450/MT**. You believe that canola market prices will improve compared to current levels, so you enter into a Focal Point contract at the same time you deliver. You select July as the futures reference month and establish the Initial Focal Point Price at **\$460**.

**On May 15, you contact your Cargill rep to establish your Final Focal Point Price.**

	Scenario 1	Scenario 2
	July canola futures price has risen to \$480	July canola futures price has fallen to \$440
Cash Price	\$450	\$450
Focal Point		
Final Focal Point Price	\$480	\$440
- Initial Focal Point Price	\$460	\$460
= Focal Point Adjustment Amount	\$20	-\$20
Focal Point Cost	-\$2.50	-\$2.50
Final Cash Price	\$467.50	\$427.50

## EXAMPLE 2: EXISTING GRAIN CONTRACT

On **April 10**, you decide to enter into a Futures First contract by locking in **\$480/MT November canola** futures price component knowing that if the market conditions change, Cargill offers Focal Point. On **June 10** you feel the market has dropped too low given the growing season ahead and feel the market may improve in the coming weeks. You enter a Focal Point with an Initial Focal Point Price at the current November futures price of **\$450**.

**On July 15, you contact your Cargill rep to establish your Final Focal Point Price.**

	Scenario 1	Scenario 2
	November futures price has risen to \$490	November futures price has fallen to \$440
Cash Price	\$480	\$480
Focal Point		
Final Focal Point Price	\$490	\$440
- Initial Focal Point Price	\$450	\$450
= Focal Point Adjustment Amount	\$40	-\$10
Focal Point Cost	-\$2.50	-\$2.50
Final Cash Price	\$517.50	\$467.50

## How does it fit in your grain marketing plan?

### FOUNDATIONAL

- ProPricing
- Pacer

### TRADITIONAL

- Cash
- Basis
- Market Tracker
